

MAGICSTREET
PRESENTATION
JUNE 2017

Conception & design of scenography, architecture & multimedia installations.

SPACE

SENSE

EXPERIENCE

We create **rich and meaningful experiences** for the public based on interactive and multimedia technologies.

We work hand in hand with architects, multimedia artists, scenic and graphic designers, software developers, storytellers and scriptwriters to offer original solutions for each project.

SCENOGRAPHY

TECHNOLOGIES

INDOORS

Creating **interactive and multimedia experiences in interior spaces**, integrating new technologies in the design of furniture, using **mapping** and video projectors as rich light sources offer a multitude of possibilities for creating unique and dynamic ambiances.

OUTDOORS

Interactive and multimedia projects can be designed as powerful tools for **communicating to large audiences** in urban spaces, **enhancing or revitalizing areas** often overlooked by city planning and development.

ON STAGE

We provide an innovative type of service that we call « **Interactive dramaturgy** » that uses new technologies to offer the specta(c)tor a fresh new experience.

We are designers specialized in projects that use technology in space to **create rich and poetic human experiences and emotions**

Our philosophy builds on four pillars that drive our work and inform our projects : **have fun, interact, learn** and **make it beautiful**

HAVE FUN

INTERACT

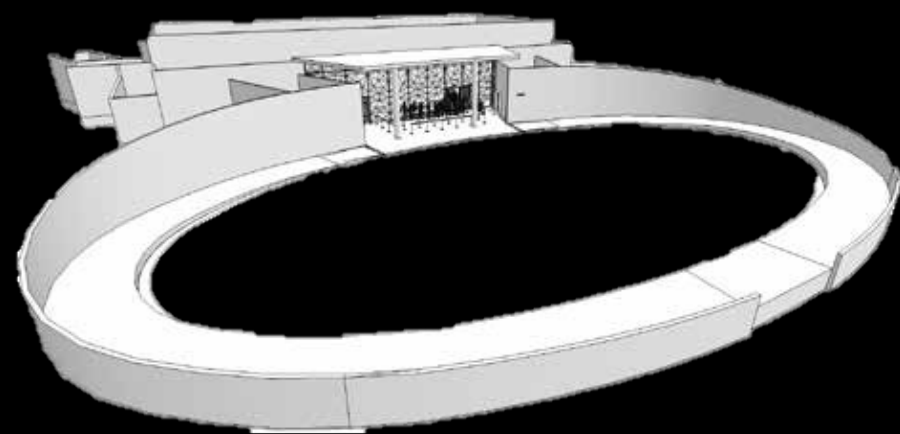

LEARN

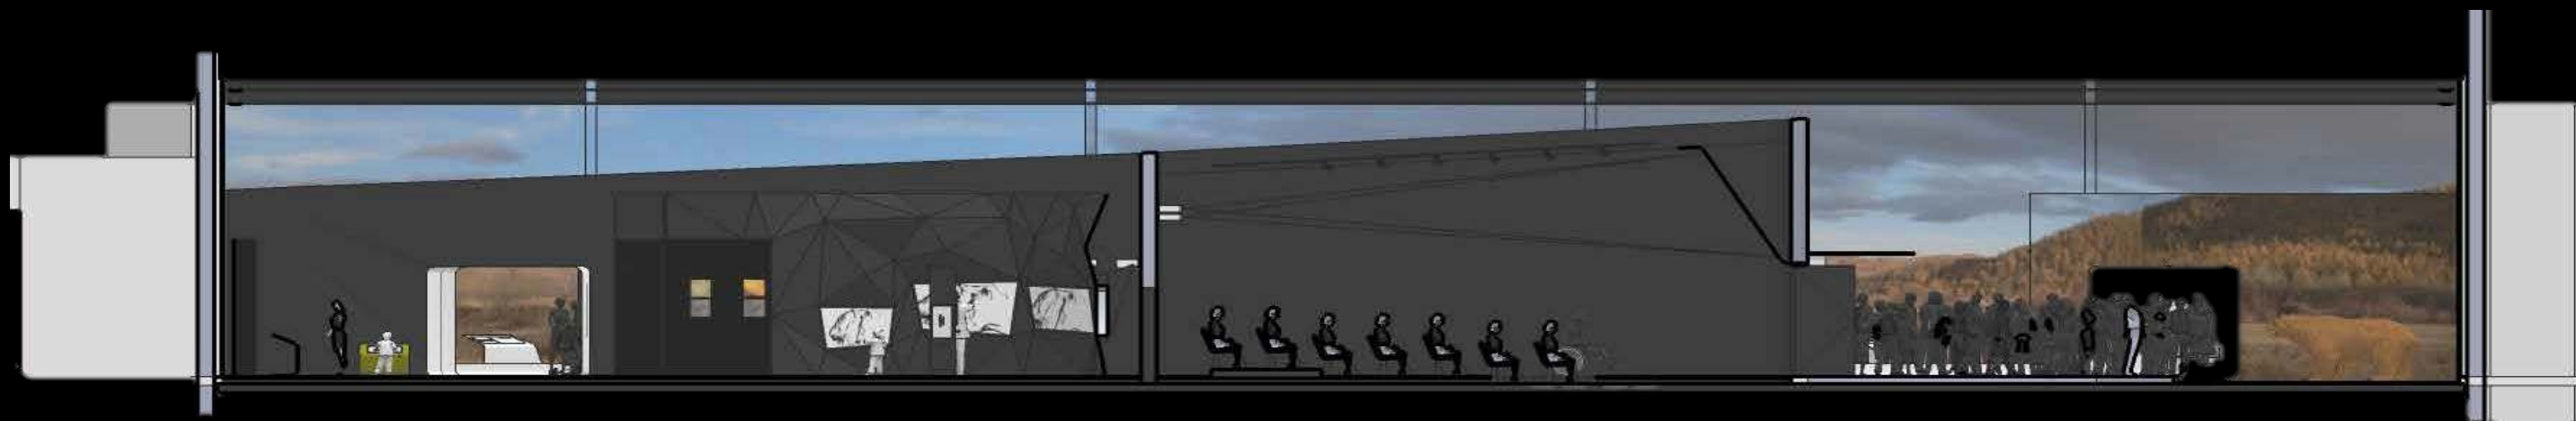

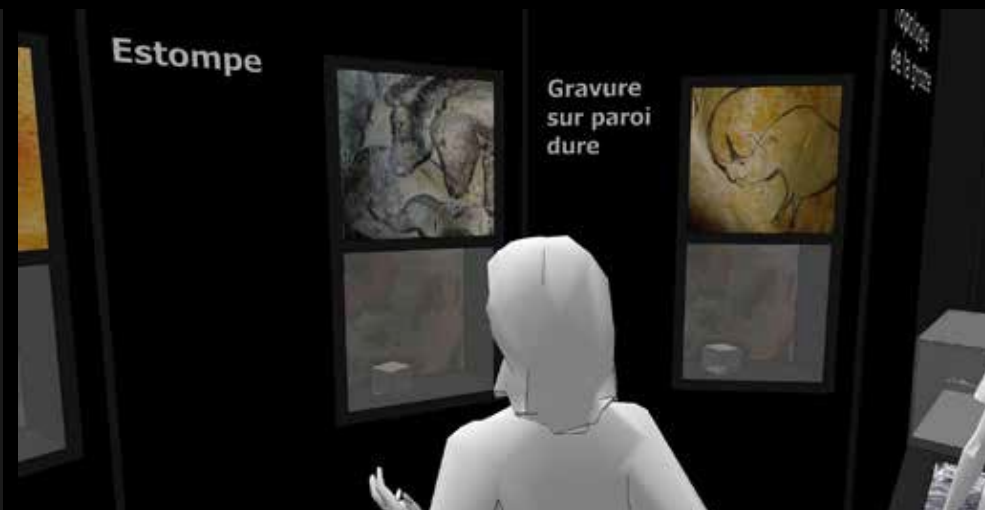

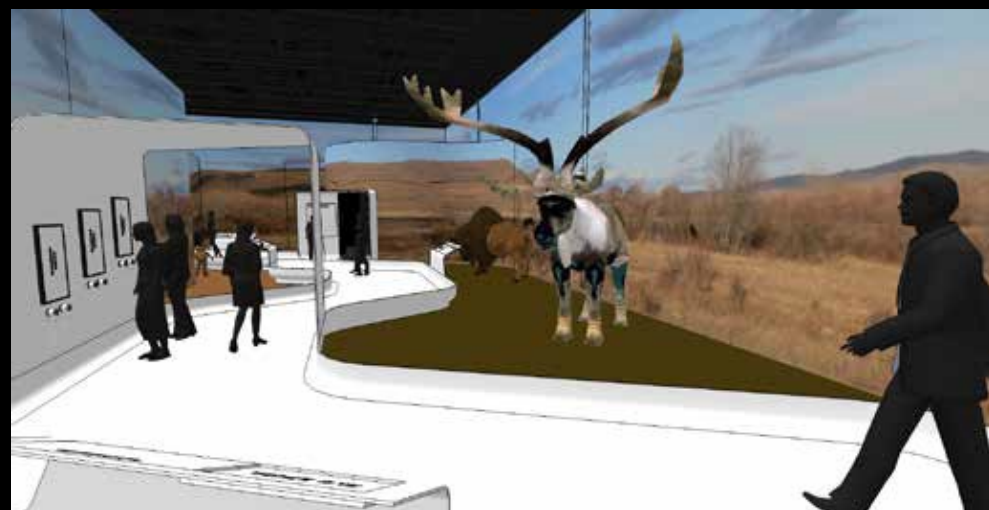

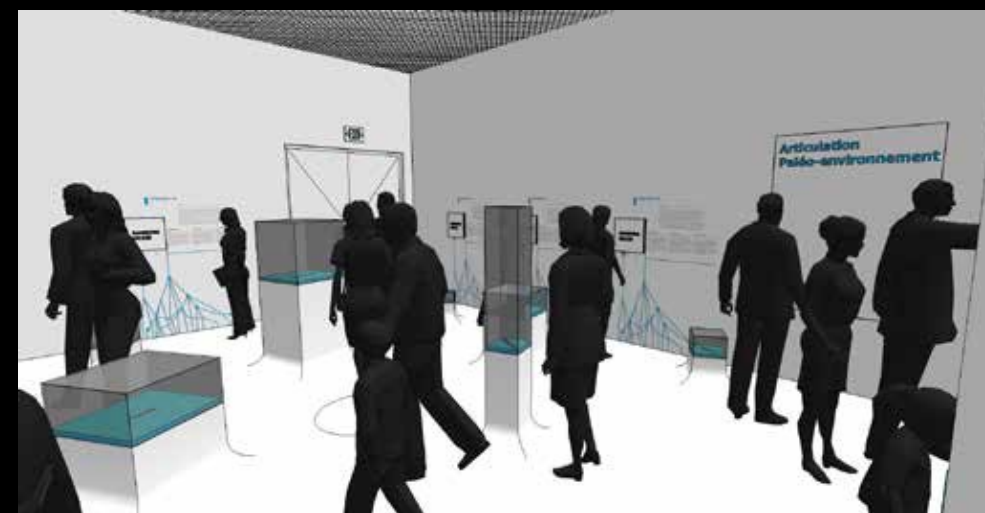

MAKE IT BEAUTIFUL
